

Muhad, a ninth-grade student, lived and breathed football. He loved the game deeply, followed every match, and constantly discussed tactics and developments with his friends. Everything changed when the new P.E. teacher arrived. Placing great importance on football, the teacher shared that he ran a football academy and invited students to join. Excited by the opportunity, some of Muhad's friends decided to

enroll.

Seeing his friends improve and enjoy the academy, Muhad's admiration for football grew, and he dreamed of joining too. He asked his parents for permission, but they refused, worried about his lack of experience. Heartbroken, he watched his friends travel on the same bus to the academy, enjoying practices and scoring goals, while his desire to join quietly grew stronger each day.

Years passed, and Muhad completed his 10th grade and higher secondary education, then pursued a degree in Computer Science Engineering. His love for football never faded, and over time his childhood dream grew—he didn't just want to play, but to make a difference in the sport. He envisioned creating his own football academy while using his skills as a future data scientist to solve real problems in football and sports development.

MUHAD

Now, Muhad is planning research to improve football—analyzing performance, enhancing training, and connecting talent with experts from football and Formula 1. The boy who once watched from the school bus is now ready to combine his passion for football with technology to make a lasting impact on the sport he loves.
